

Children and Massage

A Powerful Parental Ally

Shirley Vanderbilt

"Every child, no matter the age, should be massaged at bedtime on a regular basis." So says Tiffany Field, Ph.D., of the Touch Research Institute (TRI) in Miami, Fla. Field and her associates at TRI have worked diligently over the past decade proving the benefits of massage for children. But this is not a new concept.

Infant massage has long been a common practice in families of Eastern and African cultures. Many indigenous tribes use some form of bodywork to soothe, relax and heal their little ones, sometimes including scented oils and herbal remedies as part of the experience. With our modern technology and hurried lives, we

fail to thrive and even die without an adequate amount of physical contact. Adults, as well, can become depressed and ill if they are isolated from this most basic of human needs. Children who learn healthy views of touch and are provided with positive tactile experience by their caregivers are more likely to grow up to be adults with healthy self-esteem, a sense of appropriate boundaries and long-lasting intimate relationships.

TRI researcher Maria Hernandez-Reif, Ph.D., says she regularly gives massage to her own daughter. When asked if other parents should do the same, she says, "Absolutely, a daily massage at least. That's what the studies show. Regardless

Joy does not simply happen to us. We have to choose joy and keep choosing it every day.

Massage can cultivate a sense of well-being and security for children.

frequently find ourselves lacking in quality family time and touching each other less. The ancient practice of massage can serve to reaffirm a close bond with our children, and to convey a comforting sense of security and trust.

Touch is the first sense to develop in humans. It is essential to our health and well-being. Babies have been known to

of whether it's an infant, a child with illness, a preschooler, pregnant women, or the elderly -- no matter who we studied we have found that massage benefits all age groups and individuals of different conditions."

Kids Stress, Too

Massage is a wonderful stress-buster for children. "Oftentimes when we think about stress," Hernandez-Reif says, "we think it's just an adult condition, only adults have stress. But if you think about it, even young infants and children are prone to stress." A young child starting school who is unfamiliar with the area or children in the class will experience stress. Family illness or financial problems, divorce and even vacations can produce emotional strain. Hernandez-Reif notes that one of the consistent findings in studies of the benefits of massage therapy is a reduction in stress and stress hormone levels: "There is a relationship between stress and the immune system. If stress hormones are chronically elevated, the [hormone] cortisol will destroy the healthy immune cells that fight viruses and tumors and keep the immune system healthy. If you can reverse that, you not only reduce stress but also reduce stress hormones, allowing the immune system to bounce back and do its job, which is to heal the body and keep it healthy."

As for children's behavioral response to massage, she says, "They are happier and in a better mood. We have observed they appear more relaxed, calm and oftentimes fall asleep during massage." If it's the child's first massage, they may squirm a bit because they are not familiar with this type of touch. Due to the discomfort and pain of medical procedures inflicted on them, infants and especially premature babies may have developed a negative association with touch. Given this new, positive experience they relax and their bodies quiet down.

Infant Massage

One of the best ways to give your baby safe, positive messages about touch is to give her massage on a regular basis. Early infant massage may stimulate the developing nervous system and brain, and memory of that positive touch may then be permanently registered in the body cells. By improving circulation, respiration, digestion and elimination, massage promotes a sense of comfort in your baby and makes her less prone to colic. As the baby grows, the stroking of massage prepares the body for sitting, standing and walking by promoting

strength, motor coordination and self-confidence. Infant massage is becoming very popular with new parents and a number of resources are now available to get you started. In addition to books and videos, you can find certified infant massage therapy instructors in local private practice and at hospitals and clinics specializing in holistic medicine.

TRI's guideline of 15- to 20-minute sessions is a good rule to follow at home. Longer sessions can be overstimulating or even uncomfortable for a younger child with a short attention span.

Once massage is established as a family routine, it can benefit your child throughout his growing years. Preschoolers have shown better performance on tests of their intellectual and manual skills after a 15-minute massage. They also slept

better during naps, were less likely to be overactive, and had better behavior ratings.

For teens struggling with the growing pains of adolescence, massage helps to balance unstable hormones and can relieve anxiety by producing a state of relaxation. A supportive relationship with a massage therapist who gives them safe, unconditional touch can also increase their feelings of self-acceptance and self-confidence during those trying years.

Touch is essential to a child's development, sense of well-being, and good health. Kids reach out for touch as naturally as they do for food and water. A nightly massage can enhance the parent-child bond and ensure that touch is a positive, nurturing part of their human experience. And, as Field says, "They love it."

Giving your child a massage each day can help deepen the parent-child bond.

Prevent the Afternoon Slump

Some Tips for P.M. Energy

Jerry V. Teplitz

If you're like most people, you've experienced the afternoon slump. You know the feeling -- it's only 2 p.m., yet you feel drained. Fortunately, you can employ methods to reduce the slump's frequency and shorten its duration.

DRINK WATER.

Your body uses water even if you're not exercising. If you wait until you feel thirsty, you're already dehydrated. Keep a water bottle handy all day.

AVOID SUGAR AND SIMPLE CARBOHYDRATES.

While a mid-afternoon candy bar may give you a quick rush, it actually worsens the slump. Instead, choose protein-rich foods and complex carbs.

EAT SMALL MEALS.

Have six small meals over the course of the day instead of three large ones. Big meals cause the digestive process to divert blood from your brain to use in the digestive track.

EVALUATE YOUR LIGHTING.

Most offices are lit with cool, white

fluorescent tubes, which have a terrible effect on how people feel and function at work. A better option is full-spectrum, fluorescent tubes.

TAKE TIME FOR WALKS.

Walking gets your blood circulating, helps you breathe better, and stimulates your brain due to the increased blood flow. Take a 5- or 10-minute walk during the day.

MEDITATE.

Meditation is great for rejuvenating your body. By meditating for 15 to 20 minutes twice a day, you're keeping your body continually energized and rested.

TAKE TIME TO BREATHE AND STRETCH.

Deep breathing exercises give you an energy boost. Also, stand up and stretch to increase blood flow and stimulate the lymphatic system.

HANDLE NEGATIVITY.

Negative people and images can have a draining effect on your energy. Make a conscious effort to stay positive.

Avoid the drain office settings can bring on.

Hot or Cold for Injuries?

How to Know Which is Best for You

Art Riggs

We all know that treating an injury immediately after it happens can help minimize the pain and damage as well as facilitate recovery. But after rolling your ankle in a soccer game, or hurting your back when lifting your toddler, or tweaking your knee when stepping out of your car, what's best? Should you ice it to try to control inflammation, or would heat be better to promote circulation?

While it's difficult to establish a fail-safe rule for when to apply ice or heat, the general directive is to use ice for the first forty-eight to seventy-two hours after an acute injury and then switch to heat.

It Depends

The reality is that many conditions are not necessarily the result of a specific

injury. I call these conditions "recurrent acute" and find them by far the most common: sciatica that occurs when you drive a car; a back that flare up every time you garden; or tennis elbow from intense computer work. In these cases, consistent and frequent applications of ice may prove very helpful over long periods of time, particularly immediately after experiencing the event that causes problems.

Conversely, back or other muscle spasms caused by overexertion rather than injury may benefit greatly from heat immediately upon the onset of symptoms or immediately after exercise in order to relax the muscles and increase circulation. Also, muscle belly pain not resulting from acute and

serious trauma generally responds well to heat, which can break the spasms and release the strain. On the other hand, nerve and tendon pain--regardless of the duration of symptoms, even if you've been experience them for months--benefit from ice.

What Works for You

The bottom line: different individuals will constitutionally vary greatly in their reactions. Some people are more prone to the types of inflammation exacerbated by heat, while others find their bodies contracting and tightening at the mere mention of ice. Try each option and pay close attention to how your body and mind respond, and let your gut be your guide. Ultimately, what works best for you is, well, what's best for you.

*We cannot all
do great things,
but we can do
small things with
great love.*

-Unknown

In recent years, I have traveled to Peru to volunteer and work with poverty-level and special needs children. Last year, I worked with abandoned, special needs children at Madre Teresa de Calcutta in Cusco. My volunteer work involved physical therapy, feeding, and daily hygiene activities. This year, I will be returning and am dedicating a portion of all massage revenues to support the volunteer program as well as a special outreach project we've created, headed by my friend Saul who is helping us get basic necessities to other children & families in remote villages in Peru. So far in 2010, we have sent enough money to help several displaced families from the floods in the Cusco region. While it may not be as much as larger groups, we have been able to get tents, sleeping bags, food, and clothing to several families. Just by you coming in to get a massage, you have been able to help make this happen and we deeply and sincerely thank you.

Need a little help through the economic slump? Get started on the Healthy Habits Rewards program. After every 6th massage, your 7th one is half price. Get started at your next session. Don't forget the special people in your life and give them the gift of massage. Order your gift certificate today! Check, cash, Visa/Mastercard are accepted.
